TCHÉCOSLOVAQUIE

PRAHA (Prague).

Université de Charles (1928).

(Universita Karlova).

Fondée en 1348.

Nombre d'étudiants (1927-1928) : 8.754.

Bugdet de l'Université (1928) : 23.033.351 kč.

Recteur : **V. Slavík.** — *Directeur du Bureau* : **J. Čech.**

Fondée le 7 avril 1348 par Charles, roi de Bohême : pendant 200 ans, l'Université de Prague reste tchèque. Puis en 1653 l'empereur Ferdinand III réunit les débris de l'Université au Collège des Jésuites de Prague, d'où la dénomination ultérieure : « Universitas Carolo-Ferdinandea ». Les Allemands y sont les maitres. Cet état de choses dure jusqu'au 28 février 1882 où, grâce à l'importance toujours croissante de la langue tchèque, l'Université a été divisée en deux : l'Université tchèque et l'Université allemande. Mais ce n'est que la dernière guerre qui a rendu entièrement l'Université de Prague à la nation pour laquelle son roi Charles l'avait fondée. Avec la restitution de ses droits l'Université a repris aussi son ancien nom : **Universitas Carolina.**

Il est, d'après la loi qui l'a fondé, consacré spécialement au Soleil : il relève journellement par la photographie les quatre couches superposées, distinguées jusqu'ici dans le Soleil et son atmosphère et, en particulier, la couche supérieure avec ses protubérances ; il étudie aussi avec soin les astres qui ont un diamètre apparent, les planètes, comètes et nébuleuses et il est organisé fortement aussi pour les étoiles et les astres faibles. En particulier, il recherche dans les étoiles les couches superposées de leur atmosphère pour la comparaison avec le soleil.

L'Observatoire poursuit à la fois des recherches d'astronomie et de physique pure.

PARIS (XIVe) (1928). — **Bureau International de l'Heure** (B. I. H.) à l'Observatoire national de Paris (avenue de l'Observatoire, n° 61). Fondé en 1913.

Directeur : **C. Bigourdan.**

Le B. I. H. a pour organe officiel le *Bulletin horaire*, paraissant à peu près tous les deux mois. Le tome I comprend les années 1922, 1923, 1924 ; le tome II, années 1925, 1926, 1927. Le tome III est en cours.

Instruments. — Pendules garde-temps de haute précision (temps sidéral). — Pendules de temps moyen ; appareils émetteurs de signaux de Belin, Brillé-Leroy, etc. Installation de réception et d'enregistrement de T. S. F.

Travaux. — Les travaux du B. I. H. sont de plusieurs genres, savoir : *Commande* de signaux horaires émis par l'intermédiaire des postes français de T. S. F. ; réception et enregistrement de signaux radio-horaires d'origines diverses. Calcul des heures définitives de réception des signaux, comparaison avec les résultats des autres observatoires et publication des résultats. Etude des questions diverses touchant la détermination, la conservation et la propagation de l'heure, etc.

1° **Commande de signaux horaires.** — Le B. I. H. commande, à heures fixes, des signaux radio-horaires émis par les postes de T. S. F. de Bordeaux-Lafayette (LY, 18.900m), de Paris-Tour-Eiffel (FL, 2.650m) et de Paris-Issy (OCDJ, 32m).

Ces signaux sont de deux sortes : ceux dits type *international* ou ordinaire, et ceux du type scientifique ou signaux *rythmés*. Les signaux ordinaires, plus faciles à observer, sont destinés à répondre aux besoins de la navigation, de la météorologie, de la sismologie, des chemins de fer, postes et télégraphes, des administrations publiques, horlogers, particuliers, etc. Ils sont émis automatiquement par les appareils Belin ou Brillé-Leroy.

Les signaux rythmés donnent l'heure aussi exactement que l'état actuel de la Science le permet, pour les services astronomiques ou connexes.

2° **Réceptions et enregistrements.** — Signaux d'Annapolis, Lafayette, Nauen, Paris (FL et OCDK), Saïgon et Rugby, par comparaison avec une des pendules de haute précision.

3° **Relevé des signaux d'enregistrement**, comparaison à l'observation directe, calcul de l'heure définitive, etc...

4° **Publications.** —

NOTE SUR LE CONSEIL INTERNATIONAL DE RECHERCHES

La grande guerre, qui avait divisé le monde presque tout entier en deux groupes antagonistes, a conduit les puissances de l'Entente à établir les relations scientifiques internationales sur de nouvelles bases. Jusqu'alors, les Associations scientifiques internationales étaient comme isolées les unes des autres ; par exemple, l'Association géodésique internationale tenait ses réunions, dressait un programme, etc., presque sans tenir compte de ce qui était fait dans les autres Associations, même dans celles dont le terrain était le plus voisin du sien, comme l'Association sismologique, etc.. Après la guerre, les puissances groupées autour de l'Entente ont cherché à former un ensemble homogène, et ainsi a été constitué le « Conseil international de Recherches », organe suprême susceptible d'étendre son action à toutes les connaissances où la coopération internationale est utile. Des réunions préparatoires, tenues à Londres d'abord, à Paris ensuite, en 1918, jetèrent les bases du nouvel organisme ; et enfin une assemblée constitutive, tenue à Bruxelles en juillet 1919, l'a définitivement créé. Ce Conseil a deux organes : une *Assemblée plénière* et un *Conseil exécutif*. Chaque science forme une *Union internationale* dépendante du Conseil, mais jouissant d'une large autonomie : ainsi ont été constituées d'abord l'*Union astronomique*, puis un grand nombre d'autres (Mathématiques, Physique, Chimie, Géologie, Géographie, etc.). L'Union astronomique s'est divisée en Commissions, dont le nombre actuel peut être augmenté à mesure des besoins, et la 31e est celle de l'Heure, dont dépend le *Bureau International de l'Heure* indiqué ci-dessus.

PRAGUE (Bohême) (1928). **Observatoire national.** En 1751, les Jésuites fondèrent à Prague l'« Observatorium Pragense » astronomique. Après la suppression de l'ordre des Jésuites en 1773, l'Autriche en fit un Observatoire national autrichien portant le titre officiel « Königliche » et puis » K. K. (kaiserliche-königliche) Sternwarte » qui a été administré depuis 1883 par l'Université allemande de Prague.

Après 1918, cet observatoire avec sa bibliothèque et son riche musée (contenant entre autres aussi quelques instruments de Tycho Brahe) devint Observatoire national tchécoslovaque. Les principaux instruments de la « K. K. Sternwarte » restèrent à la disposition de la « Sternwarte der deutschen Universität ».

Le bâtiment de l'Observatoire, placé au centre de la ville, ne répondant plus aux exigences des travaux modernes, ces derniers se font provisoirement à l'Observatoire privé « Zalov » des frères Josef, et Jan Frič à Ondrejov, près de Prague (voir Ondřejov).

BIBLIOTHÈQUES ET ARCHIVES

Il est rappelé que **l'insertion n'a lieu qu'autant que le Questionnaire envoyé au Chef de service a été retourné.**

Note. — Les **Annuaires** des divers pays du monde décrivent un assez grand nombre de Bibliothèques qui ne figurent pas dans l'**Index Generalis**.

Les Bibliothèques que nous ne décrivons pas sont en général « *en sommeil* », faute de crédits ou par suite de la négligence de leurs conservateurs.

L'Index Generalis étant contraint de se limiter aux Bibliothèques les plus importantes et les plus vivantes, nous avons fait un choix aussi judicieux que possible.
